

The South Australian Government is working with the Australian Government to realise a fully upgraded non-stop North-South Corridor. Both governments are working together to build upon the significant amount of planning work that has been undertaken with each contributing \$448 million towards the construction of the \$896 million Torrens Road to River Torrens Project. This includes the recently announced scope extension which includes the section of South Road between Pym Street and Torrens Road in Croydon Park resulting in the grade separation of South Road and Torrens Road and extending the lowered motorway by approximately one kilometre.

Infrastructure Sustainability Council of Australia

The Torrens Road to River Torrens (T2T) Project has been registered under the Infrastructure Sustainability Council of Australia's (ISCA) Infrastructure Sustainability (IS) rating scheme aimed at assisting the Project to optimise sustainability outcomes both during construction and over its long-term operation.

ISCA is a not-for-profit national industry association formed to enhance sustainability of Australian infrastructure through its design, construction and operation.

T2T Sustainability

The T2T Alliance is committed to contributing to the development of infrastructure in a sustainable manner through the minimisation of impacts, where practicable, to and enhancement of the local environment, workforce, community and economy.

To work towards this we will:

- provide a supportive project culture that encourages behaviours that challenge traditional thinking, enables innovation which generates value to stakeholders, and contributes to the delivery of infrastructure sustainability;
- adopt sustainable procurement practices by incorporating environmental and social performance in subcontractor selection and adopting a preference for local industry participation, encouraging suppliers and subcontractors to adopt sustainable practices;
- minimise environmental impacts through the efficient use of resources including materials, energy and water; undertake responsible waste management, minimise discharges to air, water and land; and enable positive biodiversity benefits;
- engage with relevant stakeholders and community representatives on a regular basis; and
- create a sense of place through urban design including the potential of using surplus land for community and environmental benefit.
