

Sustainability Objectives

The T2T Alliance is committed to contributing to the development of infrastructure in a sustainable manner through the enhancement of the local environment, workforce, community and economy and the minimisation of impacts, wherever practicable. The Torrens Road to River Torrens (T2T) Project sustainability objectives, developed in conjunction with representatives of the local community, are:

Environmental

- Minimising energy use and environmental harm including noise, vibration and air quality, whilst maintaining and enhancing the local ecological value.

Social

- Using this project as a catalyst to rebuild and enhance the community and social relationships whilst nurturing and respecting cultural and historical significance of the area.

Economic

- Utilising opportunities to minimise energy, materials and resources while maintaining business within state borders.

Governance

- Ensuring decision making is compliant with current legislation and meets the environmental, social and economic objectives.

Our Performance So Far

The Project is registered with the Infrastructure Sustainability Council of Australia's (ISCA) Infrastructure Sustainability (IS) rating scheme, to assist the Project to optimise sustainability outcomes both during construction and over its long-term operation.

ISCA is a national industry association formed to enhance sustainability of Australian infrastructure through design, construction and operation.

The T2T Project has implemented a range of measures to achieve a sustainable product, and the results are evidenced with the Project awarded a "Leading" Design Phase ISCA Rating. The project is now working towards the "As Built" phase in the ISCA rating process, where T2T will aim to achieve a similarly high result for the completed and operational project. Visit
